

Session 5: Bahrain ANTR/Company documents

Date: 04 September 2020
Prepared by: wael Mohamed MFD
No. of Slides:

ICAO Documents

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

Introduction

ICAO SARPS (Standards and Recommended Practices) for each area of ICAO responsibility are contained in 19 Annexes. Each Annex deals with a particular subject area. All are subject to regular amendment and the detail in respect of many of them is contained in publications in the numbered ICAO Document Series.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

The ICAO Annexes

The Annexes are:

Annex 1 - Personnel Licensing

Standards and Recommended Practices for the licensing of flight crew members (pilots, flight engineers and flight navigators), air traffic controllers, aeronautical station operators, maintenance technicians and flight dispatchers , are provided by Annex 1 to the Convention on International Civil Aviation. Related training manuals provide guidance to States for the scope and depth of training curricula which will ensure that the confidence in safe air navigation, as intended by the Convention and Annex 1, is maintained.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

Annex 2 - Rules of the Air

The rules developed by ICAO - which consist of general rules, visual flight rules and instrument flight rules contained in Annex 2 - apply without exception over the high seas, and over national territories to the extent that they do not conflict with the rules of the State being overflown. The pilot-in-command of an aircraft is responsible for compliance with the rules of the air.

Annex 3 - Meteorological Services

The object of the meteorological service outlined in Annex 3 is to contribute to the safety, efficiency and regularity of air navigation. This is achieved by providing necessary meteorological information to operators, flight crew members, air traffic services units, search and rescue units, airport management and others concerned with aviation. Close liaison is essential between those supplying meteorological information and those using it.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 4 Aeronautical Charts

Aeronautical charts not only provide the two dimensional information common in most maps, but also often portray three dimensional air traffic service systems. Almost all ICAO States produce aeronautical charts and most segments of aviation make reference to them for planning, air traffic control and navigation purposes. Without the global standardization of aeronautical charts it would be difficult for pilots and other chart users to effectively find and interpret important navigation information. The safe and efficient flow of air traffic is facilitated by aeronautical charts drawn to accepted ICAO Standards.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 4 Aeronautical Charts

The Standards, Recommended Practices and explanatory notes contained in Annex 4 define the obligations of States to make available certain ICAO aeronautical chart types, and specify chart coverage, format, identification and content including standardized symbology and colour use. The goal is to satisfy the need for uniformity and consistency in the provision of aeronautical charts that contain appropriate information of a defined quality. When a published aeronautical chart contains "ICAO" in its title, this indicates that the chart producer has conformed to both general Annex 4 Standards and those pertaining to a particular ICAO chart type.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 5 Units of Measurement to be Used in Air and Ground Operations

This contained an ICAO table of units based essentially on the metric system, but it also contained four additional interim tables of units for use by those States unable to use the primary table. It was evident from the beginning that the achievement of standardization in units of measurement would not be easy, and Annex 5 was initially applicable only to those units used in communications between aircraft and ground stations.

ANNEX 6 Operation of Aircraft (Parts I, II and III)

The purpose of Annex 6 is to contribute to the safety of international air navigation by providing criteria for safe operating practices, and to contribute to the efficiency and regularity of international air navigation by encouraging ICAO's Contracting States to facilitate the passage over their territories of commercial aircraft belonging to other countries that operate in conformity with these criteria.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 7 Aircraft Nationality and Registration Marks

The Annex sets out procedures for selection by ICAO Contracting States of nationality marks from the nationality symbols included in the radio call signs allocated to the States of Registry by the ITU.

It sets standards for the use of letters, numbers and other graphic symbols to be used in the nationality and registration marks, and spells out where these characters will be located on different types of airborne vehicles, such as lighter-than-air aircraft and heavier-than-air aircraft.

This Annex also calls for the registration of the aircraft, and provides a sample of this certificate for use by ICAO Contracting States. This certificate must be carried in the aircraft at all times, and an identification plate, bearing at least the aircraft's nationality, or common mark and registration mark, must be affixed in a prominent position to the main entrance.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 7 Aircraft Nationality and Registration Marks

The Annex sets out procedures for selection by ICAO Contracting States of nationality marks from the nationality symbols included in the radio call signs allocated to the States of Registry by the ITU.

It sets standards for the use of letters, numbers and other graphic symbols to be used in the nationality and registration marks, and spells out where these characters will be located on different types of airborne vehicles, such as lighter-than-air aircraft and heavier-than-air aircraft.

This Annex also calls for the registration of the aircraft, and provides a sample of this certificate for use by ICAO Contracting States. This certificate must be carried in the aircraft at all times, and an identification plate, bearing at least the aircraft's nationality, or common mark and registration mark, must be affixed in a prominent position to the main entrance.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 8 Airworthiness of Aircraft

Annex 8 includes broad standards which define, for application by the national airworthiness authorities, the minimum basis for the recognition by States of Certificates of Airworthiness for the purpose of flight of aircraft of other States into and over their territories, thereby achieving, among other things, protection of other aircraft, third parties and property.

It is recognized that ICAO Standards would not replace national regulations and that national codes of airworthiness containing the full scope and extent of detail considered necessary by individual States would be required as the basis for the certification of individual aircraft.

Each State is free to develop its own comprehensive and detailed code of airworthiness or to select, adopt or accept a comprehensive and detailed code established by another Contracting State.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEXE 9 Facilitation

The Annex provides a frame of reference for planners and managers of international airport operations, describing maximum limits on obligations of industry and minimum facilities to be provided by governments. In addition, Annex 9 specifies methods and procedures for carrying out clearance operations in such a manner as to meet the twin objectives of effective compliance with the laws of States and productivity for the operators, airports and government inspection agencies involved.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 10 Aeronautical Telecommunications (Volumes I, II, III, IV and V)

Annex 10 is divided into five volumes:

Volume I — Radio Navigation Aids,

Volume II — Communications Procedures including those with PANS status.

Volume III — Communication Systems.

Part 1 — Digital Data Communication Systems.

Part 2 — Voice Communication Systems.

Volume IV — Surveillance Radar and Collision Avoidance Systems.

Volume V — Aeronautical Radio Frequency Spectrum Utilization.

The five volumes of this Annex contain Standards and Recommended Practices (SARPs), Procedures for Air Navigation Services (PANS) and guidance material on aeronautical communication, navigation and surveillance systems.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 10 Aeronautical Telecommunications (Volumes I, II, III, IV and V)

Annex 10 is divided into five volumes:

Volume I — Radio Navigation Aids,

Volume II — Communications Procedures including those with PANS status.

Volume III — Communication Systems.

Part 1 — Digital Data Communication Systems.

Part 2 — Voice Communication Systems.

Volume IV — Surveillance Radar and Collision Avoidance Systems.

Volume V — Aeronautical Radio Frequency Spectrum Utilization.

The five volumes of this Annex contain Standards and Recommended Practices (SARPs), Procedures for Air Navigation Services (PANS) and guidance material on aeronautical communication, navigation and surveillance systems.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 11 Air Traffic Services

The prime objective of air traffic services, as defined in the Annex, is to prevent collisions between aircraft, whether taxiing on the manoeuvring area, taking off, landing, en route or in the holding pattern at the destination aerodrome. The Annex also deals with ways of expediting and maintaining an orderly flow of air traffic and of providing advice and information for the safe and efficient conduct of flights and alerting service for aircraft in distress. To meet these objectives, ICAO provisions call for the establishment of flight information centres and air traffic control units.

ANNEX 12 Search and Rescue

Containing five chapters, the Annex details the organization and cooperative principles appropriate to effective SAR operations, outlines required necessary preparatory measures and sets forth proper operating procedures for SAR services in actual emergencies.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 13 Aircraft Accident and Incident Investigation

Annex 13 provides the international requirements for the investigation of aircraft accidents and incidents. It has been written in a way that can be understood by all participants in an investigation. As such, it serves as a reference document for people around the world who may be called on, often without any lead time, to deal with the many aspects involved in the investigation of an aircraft accident or serious incident.

ANNEX 14 Aerodromes (Volumes I and II)

Annex 14 extends from the planning of airports and heliports to such details as switch-over times for secondary power supply; from civil engineering to illumination engineering; from provision of sophisticated rescue and fire fighting equipment to simple requirements for keeping airports clear of birds. The impact of these numerous subjects on the Annex is compounded by the rapidly changing industry which airports must support. New aircraft models, increased aircraft operations, operations in lower visibilities and technological advances in airport equipment.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 15 Aeronautical Information Services

Annex 15 defines how an aeronautical information service shall receive and/or originate, collate or assemble, edit, format, publish/store and distribute specified aeronautical information/data. The goal is to satisfy the need for uniformity and consistency in the provision of aeronautical information/data that is required for the operational use by international civil aviation.

ANNEX 16 Environmental Protection (Volumes I and II)

Annex 16 (Volumes I and II) deals with the protection of the environment from the effect of aircraft noise and aircraft engine emissions.

Aircraft noise is a function, among other things, of the power of the engines that propel aeroplanes through the atmosphere. Reduce the power and you reduce noise, but at the same time you may affect the safety characteristics of the jet aircraft.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 16 Volume III — Aeroplane CO2 Emissions

Part I of Volume III of Annex 16 contains definitions and symbols. Part II contains Standards and Recommended Practices for certification of aeroplane CO2 emissions based on the consumption of fuel applicable to the classification of aeroplanes specified in Part II of Volume III of Annex 16, where such aeroplanes are engaged in international air navigation.

ANNEX 16 Volume IV, Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA)

Part I of Volume IV of Annex 16 contains definitions, abbreviations and symbols. Part II, Chapter 2 contains Standards, Recommended Practices and guidelines for monitoring, reporting and verification of an aeroplane operator's CO2 emissions. Part II, Chapter 3 contains Standards, Recommended Practices and guidelines on an aeroplane operator's CO2 offsetting requirements that can be reconciled using Emissions Units generated by eligible programmes under Chapter 4. The relevant applicability requirements to an aeroplane operator engaged in international air navigation are specified in the individual Chapters of Volume IV of Annex 16.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

Annex 17 Security - Safeguarding International Civil Aviation against Acts of Unlawful Interference

Annex 17 is primarily concerned with administrative and co-ordination aspects, as well as with technical measures for the protection of the security of international air transport, requiring each Contracting State to establish its own civil aviation security programme with such additional security measures as may be proposed by other appropriate bodies.

Annex 17 also seeks to co-ordinate the activities of those involved in security programmes. It is recognized that airline operators themselves have a primary responsibility for protecting their passengers, assets and revenues, and therefore States must ensure that the carriers develop and implement effective complementary security programmes compatible with those of the airports out of which they operate.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 18 The Safe Transport of Dangerous Goods by Air

Annex 18 specifies the broad Standards and Recommended Practices to be followed to enable dangerous goods to be carried safely. The Annex contains fairly stable material requiring only infrequent amendment using the normal Annex amendment process. The Annex also makes binding upon Contracting States the provisions of the Technical Instructions, which contain the very detailed and numerous instructions necessary for the correct handling of dangerous cargo. These require frequent updating as developments occur in the chemical, manufacturing and packaging industries, and a special procedure has been established by the Council to allow the Technical Instructions to be revised and reissued regularly to keep up with new products and advances in technology.

Bahrain ANTR/Company documents

ICAO Annexes and Doc Series

ANNEX 19 Safety Management

During the ICAO High-level Safety Conference 2010, the development of an Annex dedicated to Safety Management was proposed. The benefits identified of this approach included:

- Address safety risks proactively;
- Manage and support strategic regulatory and infrastructure developments;
- Re-enforce the role played by the State in managing safety at the State level, in coordination with service providers;
- Stress the concept of overall safety performance in all domains.

BAHRAIN AIR NAVIGATION TECHNICAL REGULATIONS (ANTR)

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

This manual is the Flight Dispatch Manual and Procedures (FDMP), and contains guidelines for Flight Dispatch staff to carry out 'day to day' flight planning tasks. It is issued by the authority of Manager Flight Dispatch (MFD).

The business processes of Flight Dispatch utilise the automated FPM from Sabre. This manual contains multiple references to this system. It is to be used in conjunction with following:

- Operations Manuals (OM) (EFB)
- Aircraft Flight Manuals (EFB)
- Jeppesen Airway Manuals (EFB)
- Notice To Dispatch (Email and Shear Point)
- Fleet Office Notices related to matters affecting the dispatch of aircraft
- AIPs / AIP Supps / AICs and NOTAMs
- MEL/CDL (EFB).

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

- **Chapter 2 Dispatch Administration**

- **Chapter 3 Documentation, Record Retention & Systems General**

All Flight Dispatchers must familiarize themselves with the various volumes of the Company Operations Manual and documents listed in this chapter.

- **Chapter 4 Qualification & Responsibilities**

Flight Dispatchers to provide a pre-flight briefing whenever necessary to Flight Crew and to prepare Flight Plans in accordance with the company policy, as approved by the local regulatory authority. In order to ensure the safety of aircraft operations it is necessary to have a uniform level of proficiency for Flight Dispatch personnel.

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

- **Chapter 5 Dispatch General**

It contain the general procedures practiced on daily basis:

Shift Procedures - General	Shift Handover	Message Processing – General
Arrival / En-route Traffic Delays	Air Test & Local Training Flights	Daily Status Report
Backup System & Historic Flight Plan	Special Weather, Storm Warning & Volcanic Activity	Contaminated runway
BAH to LHR Heathrow Operations - Curfew	OFP system failures	Non-Standard Configurations Flight Planning
Emergency Response	Communications	Over Fly Permission
FPM upgrade	ERA 3% special planning	Reduced Contingency Fuel Procedure
Non Dispatchable Flights	Airport with Performance Calculation Requirement	

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

- **Chapter 5 Dispatch General**

It contain the general procedures practiced on daily basis:

Shift Procedures - General	Shift Handover	Message Processing – General
Arrival / En-route Traffic Delays	Air Test & Local Training Flights	Daily Status Report
Backup System & Historic Flight Plan	Special Weather, Storm Warning & Volcanic Activity	Contaminated runway
BAH to LHR Heathrow Operations - Curfew	OFP system failures	Non-Standard Configurations Flight Planning
Emergency Response	Communications	Over Fly Permission
FPM upgrade	ERA 3% special planning	Reduced Contingency Fuel Procedure
Non Dispatchable Flights	Airport with Performance Calculation Requirement	

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

Chapter 6 Flight Dispatch Daily Functions

It contain procedures Daily Functions on daily basis:

Flight Plan Input Sheets Preparation	Alternates Display On OFP	Preparation of OFP Package (BP)
ATS Flight Plan	Non-Standard Flights	Fuel Tankering Procedures
Handling Payload Restriction (Refer To FDP-15)	Fuel Messages for Flights Originating Bahrain	Bahrain Transit Crew
In Cases Where First or Second Optimum Airport Alternate Is Not Nominated	MLW Buffer for Tankering Sector	

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

Chapter 7 All Fleet Operations

Airport Operating Minimums (AOM)	Take-Off Alternate Airport Requirement	Destination and Alternates Planning Minima Policy
Destinations & Alternates Planning Minima Guidance Table	Weather Data Sources & Meteorological Interpretation	Marginal Weather at Destination
Rescue and Fire Fighting (RFF) Categories	MEL/CDL Affecting Operations	RNP, RVSM & TCAS II Requirements
High speed and maximum range OFP	Flight Plan Wind Shear	Escape Route En-Route Airport Suitability
Taxi in Fuel	Kathmandu Operations	Operations to Indian Sub-Continent
A320 Extra Fuel for Summer Season	Operations to Isolated Aerodrome	Operating to Indian and Pakistani Destinations
Operating to Addis Ababa		

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

Chapter 8 EDTO

EDTO (Extended Diversion Time Operations) is the acronym created by ICAO to describe the operation of twin-engined aircraft over a route that exceeds one hour's flying time, at the approved one-engine inoperative cruise speed (under standard condition in still air) from an adequate airport.
(Refer to OMA 8.5 & FDP-18)

Flight Dispatch Manual and Procedures (FDMP)

Flight Dispatch Manual and Procedures (FDMP)

Chapter 9 FLIGHT DISPATCH PROCEDURES

Flight Dispatch Procedures (FDP) contains multiple procedures from different departments in Operations including the Flight Dispatch Procedures that can be identified by the pre-fix 'FDP-'.

FDP-01 Shift Hand Over	FDP-02 Arrival / En-route Traffic Delays	FDP-03 Air TEST & Local Training Flights
FDP-04 Backup System & Historic Flight Plan	FDP-05 Special Weather & Volcanic Activities	FDP-06 Systems Failure
FDP-07 Non-Standard Configuration Flight Planning	FDP-08 Emergency Response	FDP-09 Communication
FDP-10 Flight Plan Input Sheets Preparation Program	FDP-11 OFP Preparation Procedure	FDP-12 ATS Flight Plan
FDP-13 Non-Standard Flights	FDP-14 Fuel Tankering Procedures	FDP-15 Handling Payload Restrictions
FDP-16 MEL/CDL Affecting Operations	FDP-17 High Speed & Maximum Range OFP	FDP-18 EDTO Operations
FDP-19 Pilot Self Service	FDP-20 FPM Warnings	FDP-21 Overfly Permission
FDP-22 Flight Dispatch Safety Management System	FDP-23 Pilot iPad replacement & update procedure Removed	FDP-24 A321 GO-AROUND CLIMB GRADIENT LIMIT TEMP VERSES WEIGHT Removed
FDP-25 A320E OPERATIONS TO LONDON (LHR)	FDP-26 FPM Variant Error due High Temperature	FDP-27 Aircraft Tracking Procedure
FDP-28 Charter Flight Procedure		

Thank you.
